

Wireless Charging Power Hub

Integrated wireless charging surface with USB-A and USB-C device power ports

One compact station for wireless and wired charging

A circular charging hub combining a top wireless charging area with front-access USB-A and USB-C ports. White and black finishes are shown in the supplied product package.

This preliminary specification is based only on the three supplied product images. No electrical rating, wattage or dimensional value is added unless it can be verified from those images.

1. Functional Description

The Wireless Charging Power Hub is a compact circular device-charging station intended to provide both contactless and wired charging from one installation point. The top surface is marked for wireless charging, while the front panel includes one USB Type-A port and one USB Type-C port. The supplied assembly is powered through an external AC wall adapter and is shown in both white and black finishes.

2. Key Features

Wireless charging surface	Dedicated top charging area marked with a wireless charging symbol.
USB Type-A port	One front-access USB-A port for wired device charging.
USB Type-C port	One front-access USB-C port for wired device charging.
External AC adapter	Supplied imagery shows an external US-style wall adapter.
Quick Charge adapter marking	The included adapter is visibly marked Qualcomm Quick Charge 3.0.
Finish options	White and Black versions are shown.
Integrated cable	The charging hub is shown with a permanently attached or integrated power lead; exact connector architecture requires production confirmation.

3. Electrical Characteristics

AC input	TBD - adapter input voltage/frequency marking is not visible in the supplied images.
Adapter technology marking	Qualcomm Quick Charge 3.0 marking is visible on the supplied AC adapter.
DC input to charging hub	TBD - exact voltage/current is not visible.
Wireless charging output	TBD - rated wireless charging wattage is not stated in the supplied images.
USB-A output	Charging output present; exact voltage/current/power is TBD.
USB-C output	Charging output present; exact voltage/current/power and supported protocol are TBD.
Total output power	TBD - requires the controlled electrical specification or rating label.

4. Interface Summary

Wireless interface	Top circular contactless charging surface.
Wired output 1	1 x USB Type-A female port.
Wired output 2	1 x USB Type-C female port.
Power source	External AC wall adapter with attached cable to the charging hub.
AC plug shown	Two-blade US plug in the supplied imagery.

5. Mechanical Characteristics

Product shape	Circular low-profile charging hub.
Top surface	Flat wireless charging surface with metallic perimeter trim.
Colors	White / Black.
Rear construction	Perforated underside/rear cover is shown, providing ventilation openings.
Overall dimensions	TBD - no dimensioned drawing or reliable scale is included in the supplied package.
Cable length	TBD.
Weight	TBD.
Installation method	TBD - supplied imagery does not establish whether the product is free-standing, recessed, or both.

6. Typical Applications

Office desks, conference tables, reception areas, hospitality furniture, bedside furniture, collaborative workspaces and other locations requiring convenient wireless charging plus USB-A and USB-C wired charging.

7. Product Views

8. Production-Release Information Required

Before this product is released as a controlled SiCore specification, confirm the AC adapter input rating, DC output profiles, hub input voltage/current, wireless charging rated power and standard, USB-A output profiles, USB-C output profiles and charging protocols, simultaneous-output behavior, total rated power, protection functions, operating/storage temperature, dimensions, mounting method, cable length, enclosure material, product weight and applicable UL/ETL/CSA/FCC or other regional certifications.

9. Engineering Classification

Primary product category: Wireless Charging

Secondary interfaces: USB-A and USB-C wired charging

Power architecture: External AC adapter to multi-output charging hub

Document status: Preliminary English product specification derived from the supplied three-image package. Exact power, voltage, current and dimensional specifications remain TBD because they are not visible in the source material.
